---

Welcome to the new year, we came back from winter break , is just the last push before the end of the course in the middle and start practices ,we will hurry !

Tuesday, 7 – decided to strengthen the structure of the robot s adding a steel bar for the whole is more rigid and supports the entire weight of engines and bateries smoothly, we cut ourselves and threading .

Tuesday 14 – During the winter holidays , came to the study center several parts, such as bearings, ultrasonic sensors and others.

Friday 31 – day pass and performed many tests of the sensors that have reached us , 2 of them are broken , but we have been plenty thoughtful and surprises us the scope and precision of the ultrasonic sensors.
